EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Madsen on 22 December 2010.

The application has been amended as follows:

Claim 6 is cancelled.

Claim 7 is amended to "A classing comprising: an elastic boundary layer which forms the surface of the cladding, and a polymer actuator in the form of a membrane actuator which forms the cladding for the deformation of the boundary layer, wherein the cladding bears against a substrate by means of a bearing area which matches the surface area of the cladding in terms of magnitude and bears fully on the substrate, with the cladding being firmly connected to the substrate by means of the entire bearing area so that the cladding is maintained in a stable manner such that the polymer actuator is not deformed by the cladding being lifted and arching away from the substrate, but by locally applying an electric field to the polymer actuator, wherein the cladding has at least one electrode layer for the polymer actuator, which electrode layer extends only over a subregion of the polymer actuator, and wherein the electrode layer forms the webs of a honeycomb-like structure on the polymer layer".

Claim 8 is amended to "A classing comprising: an elastic boundary layer which forms the surface of the cladding, and a polymer actuator in the form of a membrane actuator which forms

Art Unit: 2837

the cladding for the deformation of the boundary layer, wherein the cladding bears against a substrate by means of a bearing area which matches the surface area of the cladding in terms of magnitude and bears fully on the substrate, with the cladding being firmly connected to the substrate by means of the entire bearing area so that the cladding is maintained in a stable manner such that the polymer actuator is not deformed by the cladding being lifted and arching away from the substrate, but by locally applying an electric field to the polymer actuator, wherein the cladding has at least one electrode layer for the polymer actuator, which electrode layer extends only over a subregion of the polymer actuator, and wherein the substrate forms an electrode for a polymer layer of the polymer actuator”

Allowable Subject Matter

2. Claims 1, 3, 5, and 7-10 are allowed.
3. The following is an examiner’s statement of reasons for allowance. The prior art does not disclose or suggest “wherein the cladding is provided with through-holes” in combination with the remaining elements of claim 1. The prior art does not disclose or suggest “wherein the electrode layer forms the webs of a honeycomb-like structure on the polymer layer” in combination with the remaining elements of claim 7. The prior art does not disclose or suggest “wherein the substrate forms an electrode for a polymer layer of the polymer actuator” in combination with the remaining elements of claim 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion
